in Sustainable
Landscape Practice*

Expertise ▪ Service ▪ Results

Residential ▪ Corporate ▪ Private Estates ▪ Landscape Contractors

Organic Plant Care delivers expert knowledge and service to clients who wish to create and maintain natural, self-sustaining lawns, trees and shrubs. Our goal is to help our clients make the transition from traditional, chemical-based programs to natural plant care.

Our expertise is based on years of

plant health care experience, sound horticultural practice and our product, Probiotic Solution. We produce Probiotic Solution and use it in our programs to boost soil biology and stimulate lush plant growth. The results are great looking plants and a healthy environment.

Our programs are environmentally sustainable and over time reduce the cost of maintenance when compared to traditional pesticide and chemical fertilizer treatments.

Organically-maintained plants have deep, fibrous,

penetrating root systems; they require less water and are more drought tolerant.

Service includes

- ⊕ On-site evaluation of lawn, trees and shrubs followed by a property action plan for maintenance
- ⊕ Program implementation
- ⊕ Pre-construction landscape consultation
- ⊕ Tree and shrub pruning
- ⊕ Insect and disease management
- ⊕ Tick, mosquito and deer repellent

If you are considering a switch to a natural turf program, please call Organic Plant Care to discuss your specific needs and goals.
